TOBOGGAN

Any track is constituted by polyester resin and fibreglass.

The components are non deformable stand temperatures within $- 25^{\circ}$ and $+ 85^{\circ}$, they have plain surface and are very resistant to mechanical stresses, to chemical and chromatic deterioration, to ultraviolet rays, to mechanical abrasion, to chlorinated or salty water.

Inside width of channels is 1200 mm and they are large 700 mm. The toboggan can be of different colours and measures and has a variable route that is made by a continuous alternating of curves, drops, descents, straight stretches.

The descent is very enjoying and stimulating and can be performed in different ways.
